Languages:	C++(Data Structures and Algorithms), Python, JavaScript, HTML, CSS
Tools:	Git/GitHub
Database:	MongoDB, MySQL
Libraries:	React.js, Bootstrap
Frameworks:	Express.js, Node.js
Non-technical:	Time Management, Adaptation, Problem Solving, Analytical skills, Project Management

PROJECTS

Campus Society

[GitHub Link](#)

- CampusSociety is a platform to streamline campus activities.
- Provides a centralized space for organizing, tracking, and collaborating on events across college communities.
- Built CampusSociety using the MERN stack (MongoDB, Express.js, React.js, Node.js). [Visit website](#)

Handicart

[GitHub Link](#)

- HandiCart is an innovative e-commerce platform crafted with React.js, MongoDB, Express.js, and Node.js.
- Dedicated to showcasing and promoting handmade products within the vibrant artisanal landscape of India.
- Simplified the purchase process with a user-friendly interface. [Visit website](#)

VerbalEx

[GitHub Link](#)

- Extracts text from government ID cards using the PyTesseract library.
- Built with a React.js frontend and a backend powered by Node.js and Python using Flask.
- Supports multilingual parsing for documents in Indian regional languages.
- Provides APIs for e-signatures and form filling, with secure data storage. [Visit website](#)

Job-Fit

[GitHub Link](#)

- Developed an Applicant Tracking System to match resumes with job descriptions using Generative AI techniques.
- Built with Python, simplifying the job application process for both job seekers and employers.
- Analyzes compatibility between resumes and job requirements to enhance hiring efficiency. [Visit website](#)

EXPERIENCE

Full Stack Developer at Kartavya Technologies Mar 2025 – Present

- Optimized Node.js APIs, managed and structured database architecture, improving data optimization, indexing, and query performance for faster and more reliable operations.
- Implemented efficient data modeling techniques, ensuring proper schema design for scalable database queries.
- Developed a SuperAdmin web panel using React.js, Node.js and MongoDB to centralize the management of business clients and streamline internal operations.
- Implemented features to monitor user activity and performance metrics for each client, enabling proactive issue resolution and improved client satisfaction.
- Integrated dashboards to display consolidated business data, reducing admin time by over 60% in fetching and analyzing business information.
